

Sixth Form Work Experience

Student Name: Ben Cliff

Employer: Technicuts

Ben undertook his work experience at Technicut. They are the world leaders in manufacturing drills for aerospace engineering. During the week, Ben worked on machines that are built to grind the drill parts. It involved very precise measurements (microns) including adjusting machinery to be 1000th of a millimetre. He worked alongside apprentices and people who had been there for 40 years to achieve carrying out these important tasks.

Ben is currently in year 12 studying Maths, Product Design and Physics. In the future, Ben would like to follow an apprenticeship route into design engineering in the automotive industry with Jaguar / Land Rover being high on the list of potential employers. This summer, Ben is taking part in an engineering training course at the Advanced Manufacturing Research Centre (AMRC).
